Tuberculosis Testing Locations

Tuberculosis (TB) is a contagious disease caused by bacteria that generally attack the lungs. The germs are spread through the air, and people are most likely to become infected if they spend many hours in close contact with individuals with TB active disease.

Health care workers are required by the state of Minnesota to test for Tuberculosis prior to employment. Visiting Angels does not reimburse for TB testing. Below are some locations to complete TB requirements (as stated in the TB Consent or Exemption). NOTE: This is not a complete list of testing locations.
